

ABSTRACT

A pro-up netting comprises three frame rods, a rope, an extending means, a buckling ring and a web. Each frame rod is formed by an insertion rod, an elastic cotton string and a connecting tube. Ends
5 of the rope have respective receptacles. The plurality of buckling rings serve for fixing the extending means. Three frame rods are connected with each frame rod having one end being connected together. Another ends of two selected frame rods are connected to two ends of the extending means and another end of another frame rod
10 is connected to a middle part of the extending means. The web is connected between each two of the three frame rods.
